Abstracts

The global Ethylene-vinyl Acetate (EVA) Infusion Bag market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ethylene-vinyl acetate infusion bag is used as intravenous (IV) bag, which helps to carry fluids in the patient's body through the intravenous route. In addition, these bags can be used to carry vitamins, lipids, and oncology medications in patients. They are often transparent, which helps in easier visual assessment of the IV solution. Most ethylene-vinyl acetate infusion bags are UV-protected within the wavelength range of 170 nm to 520 nm. These bags are toxicologically harmless when compared to IV bags made using polyvinyl chloride (PVC). Ethylene-vinyl acetate infusion bags are often made in sizes ranging from 500 to 3,000 ml.
