Abstracts

Ethylenediamine (abbreviated as en when a ligand) is the organic compound with the formula $C_2H_4(NH_2)_2$. This colorless liquid with an ammonia-like odor is a strongly basic amine. It is a widely used building block in chemical synthesis.

Ethylenediamine is used in large quantities for the production of many industrial chemicals. It forms derivatives with carboxylic acids (including fatty acids), nitriles, alcohols (at elevated temperatures), alkylating agents, carbon disulfide, and aldehydes and ketones. Because of its bifunctional nature, having two amines, it readily forms heterocycles such as imidazolidines. Ethylenediamine is a well-known chelating ligand for coordination compounds, such as $[Co(ethylenediamine)_3]$.

According to our (Global Info Research) latest study, the global Ethylenediamine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.
