## **Abstracts**

According to our (Global Info Research) latest study, the global Ethyleneurea market size was valued at US\$ 213 million in 2024 and is forecast to a readjusted size of USD 309 million by 2031 with a CAGR of 5.1% during review period.

Ethyleneurea also known as 2-imidazolidinone, ethylene urea, etc., is an important member of imidazole series compounds and is an efficient formaldehyde trapping agent. Excellent tear and wrinkle finish for everyday textiles. Due to its advantages of low toxicity, high polarity and high safety, 2-imidazolidinone and its derivatives have become important intermediates in the synthesis of medicines and pesticides, and are widely used in the synthesis of various antibiotics and pesticides. In addition, imidazolone compounds can also be added to metals as corrosion inhibitors to inhibit the corrosion of metals. Therefore, it has a broad market prospect, especially the high-purity 2-imidazolidinone and its derivatives have become the scarce fine chemicals.

Ethyleneurea is an important chemical raw material, widely used in the resin industry, pharmaceutical chemical industry, textile industry, paint, coating and adhesive fields.

The main global ethyleneurea manufacturers include BASF, Hebei Kangzhuang, Suichang Limin, Shandong Zhuosheng, Hebei Aoge Chemical, etc., among which the top three manufacturers account for more than 63% of the market share. China is the largest production area of ??ethyleneurea in the world.

In the application field, ethyleneurea is used as a formaldehyde capture agent to remove residual formaldehyde in fabrics, and is also used as an intermediate for fine chemicals. It can also be used to make resins, plasticizers, spray paints, adhesives, etc. In addition, ethyleneurea is also used in the synthesis of chiral microporous materials

from non-chiral precursors, the preparation of aromatic and heteroaromatic Nacylureas by microwave-assisted palladium-catalyzed carbonylation, the synthesis of highly water-soluble peptides based on human neutrophil elastase inhibitors, the synthesis of antibacterial heterocycles, Pd-catalyzed C-N bond formation with heteroaromatic toluenesulfonates, and the oxidative amidation reaction of activated alkenes.

With the advancement of technology and the expansion of application areas, the ethyleneurea market is expected to continue to grow.
