Abstracts

The global Ethylhexyl Triazone market size is expected to reach \$ 108 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

Ethylhexyl triazine ketone is a highly effective, photostable, and broad-spectrum oil-soluble chemical sunscreen, primarily used in sunscreens, lotions, and lipsticks. It is specifically designed to absorb UVB rays, effectively preventing sunburn, and also offers some protection against higher wavelengths of UVA.

The upstream supply mainly relies on petrochemical-derived basic organic raw materials. Key intermediates include cyanuric chloride and ethylhexyl para-aminobenzoate. In addition, the organic solvents and high-precision synthetic catalysts required in the production process are also important supply links.

Global sales are projected to reach approximately 4,000 tons in 2025, with an average selling price of US\$19,542 per ton. The industry's gross profit margin is between 20% and 30%.

The surge in global demand for high-SPF sunscreens is the core driver of industry growth. Consumers' heightened sensitivity to the safety of sunscreen agents has propelled the adoption of EHT (Extra-Highly Hydroxyl) products. Its large molecular weight prevents it from penetrating the stratum corneum, avoiding the risk of endocrine disruption, perfectly meeting the stringent needs of the sensitive skin and maternal and infant markets. Secondly, the recovery of the outdoor economy and beach tourism has directly boosted sales of high-SPF and highly waterproof and sweat-resistant products, and EHT's strong oleophilicity and water resistance make it stand out in the sports sunscreen segment. Furthermore, with tightening regulations on sunscreen labels in

major markets such as China and the EU, formulators have been forced to abandon raw materials with poor photostability and instead adopt EHT, a highly efficient filter that maintains stable performance under prolonged sun exposure. This technological advancement has brought significant profit growth to leading fine chemical raw material suppliers.
