According to our (Global Info Research) latest study, the global ETO Sterilizers market size was valued at USD 57 million in 2023 and is forecast to a readjusted size of USD 82 million by 2030 with a CAGR of 5.5% during review period.

This Report focus on Ethylene Oxide (ETO) Sterilizers market.

Ethylene oxide (also known as EO or EtO) is a very efficient sterilizing agent. It is a bactericide, a sporicide and a viricide. It has a very favourable diffusion coefficient and can be used for thermo-sensitive or very delicate materials.

Ethylene oxide processing is widely used for the sterilization of healthcare devices and instruments. The process involves exposing products to ethylene oxide gas under vacuum in a sealed chamber. EO sterilization assures that a safe and sterile product will be delivered to the market each and every time.

Ethylene Oxide (EtO) sterilization is mainly used to sterilize medical and pharmaceutical products that cannot support conventional high temperature steam sterilization – such as devices that incorporate electronic components, plastic packaging or plastic containers.

Generally sterilization with ethylene oxide in the pharmaceutical industry has been restricted given the risk it entails due to its high mutagenic and carcinogenic properties. GMP's specify that this type of sterilization should only be used when there is no alternative sterilization technology.
