Abstracts

The global European Sea Bass market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The European Sea Bass is a commercially important species that is subject to fisheries management measures to ensure sustainable harvesting. Regulatory bodies, such as the European Union (EU) and individual coastal states, implement quotas, size limits, and other measures to prevent overfishing and protect the stock. These recommendations are considered by fisheries managers in the EU and neighboring countries. European Sea Bass is popular in seafood markets, and consumer demand often drives fishing and aquaculture activities. Sustainable seafood certifications, such as those provided by the Marine Stewardship Council (MSC) or the Aquaculture Stewardship Council (ASC), may influence market preferences. Concerns have been raised about the sustainability of European Sea Bass fisheries due to overfishing and the potential impact on the species' population. Conservation efforts aim to balance the economic importance of the species with the need to maintain healthy and resilient populations.

European Sea Bass (*Dicentrarchus labrax*), also known simply as Sea Bass, is a popular marine fish species found in the coastal waters of the northeastern Atlantic Ocean and the Mediterranean Sea.
