## Abstracts

According to our (Global Info Research) latest study, the global EUV Photoresist and Developers market size was valued at US\$ 253 million in 2024 and is forecast to a readjusted size of USD 1195 million by 2031 with a CAGR of 25.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Extreme Ultraviolet (EUV) photoresist and developers are essential materials used in the photolithography process for semiconductor manufacturing, specifically for creating intricate patterns on silicon wafers during the production of integrated circuits (ICs). The use of EUV lithography technology enables the fabrication of smaller features (down to 7 nm and beyond) on chips, allowing for higher transistor density, improved performance, and lower power consumption.
