The global EV Active Battery Disconnect Unit market size is expected to reach \$ 1984 million by 2032, rising at a market growth of 13.5% CAGR during the forecast period (2026-2032).

The EV Active Battery Disconnect Unit is a safety-critical electromechanical device designed for electric vehicles to quickly disconnect high-voltage battery circuits during severe collisions, thermal runaway, or significant electrical faults. By providing rapid isolation, this unit ensures high reliability and compliance with automotive safety standards. In 2025, production of EV Active Battery Disconnect Units reached approximately 36.13 million units, with an average price of USD 22 per unit. In 2025, the industry's capacity utilization rate was about 85%, and the average gross margin was around 43%. Upstream, key inputs include melt materials such as copper and silver wire, busbar systems, insulation materials, and electronic control units, with representative suppliers such as Mitsubishi Shindoh, Nexans, GE, and Denso Corporation providing essential components. The midstream segment focuses on structural and thermal design, pyrotechnic integration, electrical isolation performance, system validation, and automotive-grade reliability testing, determining response speed and safety robustness. Downstream, the EV Active Battery Disconnect Unit is widely used in battery systems, with manufacturers like Tesla, Volkswagen, BYD, and SAIC Motor incorporating these units to enhance high-voltage safety systems.

The EV Active Battery Disconnect Unit is becoming increasingly integral as electric vehicles (EVs) evolve with more advanced battery technologies and greater power demands. This unit offers a reliable solution to disconnect high-voltage systems during critical situations, mitigating risks of thermal runaway and electrical faults. As EV production scales and regulatory pressure for enhanced vehicle safety grows, the need

for such safety devices will intensify. With automakers focusing on battery safety as a priority, the demand for these units is set to rise, especially in regions enforcing stringent safety standards for electric vehicle systems.
