Abstracts

The global EV Battery Leak Testing Equipment market size is expected to reach \$ 2609 million by 2032, rising at a market growth of 16.1% CAGR during the forecast period (2026-2032).

Battery Cell Sorting Machine refers to automated or semi-automated equipment used to test, classify, grade, and sort battery cells before battery pack assembly, module assembly, or quality inspection. These machines are mainly used to sort cells according to open-circuit voltage, internal resistance, capacity, barcode information, appearance, size, weight, and consistency requirements. In this report, the market mainly includes cylindrical battery cell sorting machines, prismatic battery cell sorting machines, pouch cell sorting machines, OCV/IR sorting machines, capacity grading sorting machines, barcode-linked sorting machines, automatic channel sorting machines, and integrated battery cell testing and sorting systems. The 2025 benchmark ASP is US\$36,000 / set, shipment volume is 24.50k sets, and average gross margin is 36%. The upstream industry chain includes voltage and internal resistance testers, capacity testers, barcode scanners, PLCs, industrial PCs, servo motors, probes, fixtures, sensors, conveyors, manipulators, pneumatic components, machine vision modules, software systems, and sheet metal structures. The midstream includes mechanical design, testing module integration, sorting channel design, software development, data traceability system integration, automation debugging, calibration, accuracy testing, safety testing, and production line integration. The downstream includes lithium battery pack manufacturers, EV battery manufacturers, energy storage battery manufacturers, consumer electronics battery producers, e-bike battery pack manufacturers, power tool battery pack manufacturers, battery recycling companies, and battery R&D laboratories.

Battery cell sorting machines are becoming increasingly important as battery

manufacturers require better cell consistency, higher pack reliability, and more traceable quality control. Since cells from the same batch may still differ in voltage, internal resistance, capacity, and aging characteristics, sorting equipment helps group cells with similar performance before pack assembly. Demand is supported by the expansion of electric vehicles, energy storage systems, two-wheeler batteries, power tools, consumer electronics, and battery recycling. Product development is moving toward higher sorting speed, more channels, stronger data traceability, automatic barcode binding, MES integration, multi-parameter testing, machine vision inspection, flexible compatibility with different cell sizes, and better integration with battery pack assembly lines.
