Abstracts

The global EV Charger Touch Screen Monitor market size is expected to reach \$ 502 million by 2032, rising at a market growth of 9.1% CAGR during the forecast period (2026-2032).

In 2025, global EV Charger Touch Screen Monitor production reached approximately 450 K units, with an average global market price of around 580 US\$/unit.

An EV Charger Touch Screen Monitor is a specialized human-machine interface (HMI) device integrated into electric vehicle (EV) chargers, designed to enable users to operate, monitor, and interact with the charging process intuitively. It is composed of a high-definition touch display panel, a control module, a data transmission unit, and a protective casing with waterproof, dustproof, and anti-glare functions, suitable for both indoor and outdoor charging scenarios. The monitor allows users to initiate and stop charging, select charging modes, view real-time charging data (such as charging current, voltage, and duration), check charging costs, and access fault prompts, while also supporting communication with the charger's main control system to transmit operation commands and feedback working status. It serves as the core interactive component of EV chargers, enhancing user experience, simplifying operation procedures, and ensuring the safe and efficient operation of the charging process.

The demand for EV Charger Touch Screen Monitors is driven by the rapid development of the global electric vehicle industry, the continuous expansion of EV charging infrastructure, and the increasing emphasis on user experience and charging safety. From the demand side, the growing number of public and private EV charging piles has led to a sustained need for matching touch screen monitors, as they are essential for user interaction and charger operation; in addition, the trend of intelligent, networked EV

chargers has promoted the demand for touch screen monitors with higher clarity, faster response speed, and more stable performance, as well as additional functions such as remote control and data synchronization. In terms of business opportunities, first, developing touch screen monitors with strong environmental adaptability (high and low temperature resistance, waterproof, anti-glare) can meet the diverse needs of indoor and outdoor charging scenarios. Second, integrating intelligent functions such as wireless charging status query, payment integration, and fault self-diagnosis can improve product added value and cater to the trend of charging infrastructure intelligence. Third, cooperating with EV charger manufacturers to provide customized matching touch screen monitors, as well as providing after-sales maintenance and replacement services, can expand market coverage and form stable cooperative relationships. Additionally, the upgrading of existing charging piles to intelligent models also creates replacement demand for touch screen monitors, while the continuous improvement of charging equipment standards provides opportunities for enterprises with technical advantages to occupy the market.
