## Abstracts

The global EV Axle market size is expected to reach \$ 9820.2 million by 2029, rising at a market growth of 12.9% CAGR during the forecast period (2023-2029).

In the global market, the major core players of Electric Vehicle Electric Drive Axle (EV Axle) are BYD, Nidec Corporation, GKN Automotive Limited and others. The top three players within this industry account for about 45% of the market share. North America, Europe, and Asia Pacific are the major manufacturing regions for this product, with North America accounting for around 15% of the global market share. The product is categorised on the basis of peak power into less than 100 kW peak power, 100 kW to 200 kW peak power, and more than 200 kW peak power. The products are widely used in passenger cars and commercial vehicles.

It is equivalent to the engine + gearbox of a traditional car. The powertrain of a pure electric vehicle consists of a motor, electronic control and reducer. It is generally called the 'electric drive' system. It is the heart of the electric vehicle and is equivalent to the engine + gearbox in a traditional fuel vehicle. Its functions are to control the The conversion of chemical energy into vehicle kinetic energy is also the core component that determines vehicle power, energy consumption and other performance. Compared with the engine + gearbox, the electric drive system has the advantages of simple structure, small size, and can be started with load.

Electric vehicle eAxle is a mechatronic drive system designed for electric vehicles and is the core component of the electric vehicle power system. It integrates components such as motors, transmissions and electronic controls to provide power for electric vehicles.
