Abstracts

The global EV Fast Charging Cable market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An electric vehicle (EV) charging cable is the connecting cable between the charging station and the EV that supplies electricity for the recharging of EVs such as batteryelectric cars (BEVs) and plug-in hybrid vehicles (PHEVs). These cables are made up of three parts, including a connector plugged into the vehicle, a length of wire, and another plug connected to a power source. It primarily collects AC power from the wall socket and converts it into DC power. Moreover, these charging cables have a liquid cooling system that allocates heat consistently and reduces the risk of overheating. Meanwhile, the water–glycol mixture is the most widely used coolant for such cooling systems, owing to its ease of maintenance and environmental-friendly features. In addition, there is a controller present that monitors the temperature and regulates the flow of the coolant.

This report studies the global EV Fast Charging Cable production, demand, key manufacturers, and key regions.
