## Abstracts

The global EV-Fluids market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Global EV sales continued strong. A total of 10.5 million new BEVs and PHEVs were delivered during 2022, an increase of +55 % compared to 2021. China and Europe emerged as the main drivers of strong growth in global EV sales. In 2022, the production and sales of new energy vehicles in China reach 7.0 million and 6.8 million respectively, a year-on-year increase of 96.9% and 93.4%, with a market share of 25.6%. The production and sales of new energy vehicles have ranked first in the world for eight consecutive years. Among them, the sales volume of pure electric vehicles was 5.365 million, a year-on-year increase of 81.6%. In 2022, sales of pure electric vehicles in Europe will increase by 29% year-on-year to 1.58 million.

Though there can be various automotive fluids for E-mobility, these are broadly classified into three categories. E-transmission fluids that are used in battery electric vehicles (BEVs), plug-in hybrids (PHEVs), and fuel cell electric vehicles (FCEVs). Second are the E-greases designed to counter noise, vibration, and harshness (NVH) levels within the electric vehicles. Third are the E-thermal fluids, which are themselves further sub-categorized into three types of thermal management solutions.

This report studies the global EV-Fluids production, demand, key manufacturers, and key regions.
