The global EV Oil-cooled Electric Drive System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The EV oil-cooled electric drive system refers to a type of electric drive system used in electric vehicles (EVs). In this system, the electric motor and other components of the drive system are cooled using oil instead of traditional air cooling methods. In an oil-cooled system, oil is circulated through the components of the drive system to absorb and dissipate heat generated during operation. The oil acts as a coolant, helping to maintain optimal operating temperatures and prevent overheating. This cooling method is particularly beneficial in high-performance and heavy-duty electric vehicles that generate significant heat during operation.

This report studies the global EV Oil-cooled Electric Drive System production, demand, key manufacturers, and key regions.
