According to our (Global Info Research) latest study, the global EV Traction Motor Bearings market size was valued at US\$ 772 million in 2025 and is forecast to a readjusted size of US\$ 1485 million by 2032 with a CAGR of 9.8% during review period.

EV Traction Motor Bearings are high-precision components situated at both ends of the electric vehicle's rotor to support rotational motion and sustain mechanical loads. Unlike conventional industrial motors, traction motors in EVs demand bearings that can withstand ultra-high rotational speeds (often exceeding 15,000 to 20,000 RPM) and rapid acceleration. To mitigate the risk of electrical erosion caused by high-frequency switching in the inverter (EDM currents), these bearings often incorporate specialized features such as ceramic rolling elements (hybrid bearings) or insulating coatings. Key performance requirements include low frictional torque for range extension, superior high-temperature stability, and advanced sealing technologies to prevent lubricant leakage. In 2025, global EV Traction Motor Bearings production reached approximately 50 million units and average price was 15 usd/unit .
