According to our (Global Info Research) latest study, the global EV Wireless Charging Solutions market size was valued at US$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Electric Vehicle (EV) Wireless Charging Solutions refer to technology and systems that enable electric vehicles to charge their batteries without the need for physical cables or plugs. This innovative approach to charging involves using electromagnetic fields to transfer energy from a charging pad or ground-based unit to the vehicle's battery through a process known as wireless power transfer (WPT) or wireless charging.

Global EV sales continued strong. A total of 10,5 million new BEVs and PHEVs were delivered during 2022, an increase of +55 % compared to 2021. China and Europe emerged as the main drivers of strong growth in global EV sales. In 2022, the production and sales of new energy vehicles in China reach 7.0 million and 6.8 million respectively, a year-on-year increase of 96.9% and 93.4%, with a market share of 25.6%. The production and sales of new energy vehicles have ranked first in the world for eight consecutive years. Among them, the sales volume of pure electric vehicles was 5.365 million, a year-on-year increase of 81.6%. In 2022, sales of pure electric vehicles in Europe will increase by 29% year-on-year to 1.58 million.
