According to our (Global Info Research) latest study, the global EV Wiring Harness market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Harness is the logical arrangement of wires, terminals and connectors, which runs through the whole vehicle, transmits data and power, and effectively 'connects' many different components. The network transmits energy and information in a way similar to the human circulatory system and central nervous system. A variety of solid materials can be used to make wire harnesses. PVC, vinyl, thermoplastic elastomer, polyurethane and polyethylene are the most popular. The specific substance used in the harness depends largely on where it is used. Harness is the main electrical component of automobile. It consists of many wires, which transmit data and power from many parts of the car.
