## Abstracts

The global EVA Encapsulation Film market size is expected to reach \$ 21332 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

In 2025, global production of EVA Encapsulation Film reached 12 billion square meters, with an average price of USD 1.25 per square meter, a production capacity of 15 billion square meters, and a gross margin of 22%.

EVA Encapsulation Film is a functional film material based on ethylene-vinyl acetate (EVA) copolymer, formulated with additives such as crosslinking agents, antioxidants, and UV absorbers. It is widely used in photovoltaic module lamination to provide bonding, sealing, moisture resistance, and protection for solar cells, while offering high transparency, electrical insulation, and weather resistance.

The EVA Encapsulation Film market is primarily driven by the photovoltaic industry, with growing global solar installations continuously increasing demand for high-performance encapsulation materials. China is the largest production and consumption market, with a relatively high industry concentration where leading players hold advantages in technology and scale. Meanwhile, the development of double-glass modules, N-type cells, and high-power modules is raising requirements for higher transparency, lower degradation, and enhanced weather resistance, driving the industry toward premium and differentiated products.

This report studies the global EVA Encapsulation Film production, demand, key manufacturers, and key regions.
