Abstracts

The global EVA Foam market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

EVA foam is the acronym for the closed cell ethylene-vinyl acetate copolymer foam used as an effective substitute for a variety of materials used in production. It is a suitable substitute for natural rubber, vinyl, neoprene, polyurethane and PVC foams, wood composites, felts, fiberglass, and mineral wool. The EVA foam material characteristically provides good gloss and clarity, remains strong at low-temperatures, retains its resistance to UV radiation and stress-cracking, and possesses hot-melt adhesive waterproof properties.

This report studies the global EVA Foam production, demand, key manufacturers, and key regions.
