According to our (Global Info Research) latest study, the global Eva Glass Film market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

EVA glass film is a high-performance interlayer material made of ethylene-vinyl acetate copolymer, which is widely used in architectural glass, automotive glass and photovoltaic modules. Its high transparency ensures excellent optical properties and can effectively transmit light; its excellent adhesion properties enable it to adhere firmly to the glass surface during the lamination process, forming a stable interlayer structure to prevent the glass from flying when broken. EVA glass film also has high mechanical strength and toughness, providing excellent impact resistance, while also having excellent weather resistance and UV resistance, and can be exposed to outdoor environments for a long time without obvious aging or yellowing.
