According to our (Global Info Research) latest study, the global EVA market size was valued at USD 6441.3 million in 2023 and is forecast to a readjusted size of USD 7873.3 million by 2030 with a CAGR of 2.9% during review period.

Ethylene vinyl acetate (EVA) is formed by the copolymerization of ethylene and vinyl acetate. It has excellent toughness property. When EVA is forged into a porous material, it acts similar to rubber due to its elastic property. EVA when compared with low-density polyethylene (LDPE) is three times more flexible. This material has various properties, such as low-temperature toughness, stress-crack resistance, ultraviolet radiation resistance, good barrier properties, and hot-melt adhesive waterproof properties.

In terms of geographic regions, APAC will be the major revenue contributor to the EVA market throughout the forecast period. China is the largest consumer of EVA in APAC. The rise in demand for flexible packaging and the growth of the footwear industry in China, is driving the demand for EVA market in the region.
