Abstracts

Ethylene vinyl acetate (EVA) is formed by the copolymerization of ethylene and vinyl acetate. It has excellent toughness property. When EVA is forged into a porous material, it acts similar to rubber due to its elastic property. EVA when compared with low-density polyethylene (LDPE) is three times more flexible. This material has various properties, such as low-temperature toughness, stress-crack resistance, ultraviolet radiation resistance, good barrier properties, and hot-melt adhesive waterproof properties.
