Abstracts

The global Evaporation Residue Tester market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Evaporation residue tester, means the test sample is immersed in the specified liquid; the evaporation dish is washed and dried, put into the chamber and dried until the weight is constant; take an appropriate amount of liquid in the evaporation dish, put it into the water bath and dried; then put the evaporation dish into the chamber and dried at high temperature, weighed; then dried again, weighed again, repeat this process until the weight is constant; this weight minus the weight of the evaporation dish itself is the evaporation residue value.
