Abstracts

According to our (Global Info Research) latest study, the global Evaporative Cooling Unit market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The unit adopts evaporative cooling technology, adopts direct/indirect heat exchange core body, has low requirements on water quality, and has excellent heat exchange performance; in low temperature season, the operation mode is dry working condition, and there is no need for water consumption. In high-temperature and low-humidity environment, the operating mode of the unit is wet working mode, without the need for a compressor mechanical refrigeration system, energy-saving and high-efficiency. In the high-temperature and high-humidity season, the unit operates under complex conditions, and some natural cold sources are used, so only a certain amount of mechanical refrigeration is needed.
