Abstracts

According to our (Global Info Research) latest study, the global Event Transport Services market size was valued at US\$ 3027 million in 2025 and is forecast to a readjusted size of US\$ 5067 million by 2032 with a CAGR of 7.0% during review period.

Event Transport Services refer to temporary, project-based transportation organization services provided for attendees, guests, staff, media, athletes, performers, technical crews, and VIPs in connection with conferences, exhibitions, sporting events, concerts, music festivals, celebrations, corporate events, weddings, government functions, and large-scale public events. Key components include pre-event transport planning, vehicle dispatching, shuttle bus arrangements, transfers between airports, hotels, and venues, VIP chauffeur services, group coach services, parking lot shuttles, "last-mile" connections, on-site traffic coordination, fleet management, driver scheduling, passenger guidance, real-time monitoring, and emergency contingency planning.

Major events such as the World Cup, the Olympics, F1 races, marathons, music festivals, and large-scale exhibitions generate passenger traffic peaks far exceeding those of daily commuting within short timeframes. Consequently, event transportation services have evolved from simple vehicle rentals into comprehensive systems integrating passenger flow forecasting, multi-modal shuttle services, on-site dispatching, and emergency management. During the 2026 World Cup, public transit, bus, rail, and shuttle services across multiple North American cities will face immense pressure from peak passenger volumes; Reuters has noted that the tournament will serve as a critical test of the service capacity of North America's ground transportation systems.

The industry is shifting from standalone vehicle rentals to integrated transportation

operations and management. While traditional event transportation relied on local bus operators, luxury vehicle providers, or rental companies, organizers of large-scale events now require unified dispatch platforms, driver management, route planning, passenger grouping, real-time communication, vehicle tracking, on-site staff coordination, and contingency vehicle availability. Platforms like CharterUP highlight their ability to help event planners rapidly organize bus transportation for large events, demonstrating how digital matchmaking and platform-based dispatching are transforming traditional charter services.
