Abstracts

The global Evernia Furfuracea Extract market size is expected to reach \$ 26.74 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of Evernia Furfuracea Extract(CAS No.90028-67-4) is estimated at approximately 155 tons, with an average global market price of about USD 124/kg. The gross margin of major producers in the industry is generally around 30%-45%.

Evernia Furfuracea Extract is a natural fragrance ingredient derived from tree-growing lichens through solvent extraction, concentration, alcohol treatment or further refining. Common product forms include tree moss concrete and tree moss absolute. The product features typical mossy, woody, earthy, forest-like, tobacco-like and leathery odor characteristics, with a rich and natural scent profile. It is mainly used to enhance base-note depth, strengthen natural woody-mossy nuances, improve fragrance harmony and prolong scent longevity. As natural tree moss may contain sensitizing components, modern products usually require refining, desensitization or low-allergen control to meet regulatory requirements for fragrances and cosmetics.

Its upstream mainly includes tree moss lichen raw materials, ethanol and organic solvents, extraction equipment, refining equipment and quality testing systems. The midstream covers the production of tree moss concrete, tree moss absolute and low-allergen Evernia Furfuracea Extract. The downstream mainly serves fragrance and flavor, tobacco, cosmetics, food and other odor modification applications.
