## Abstracts

According to our (Global Info Research) latest study, the global eVTOL Battery market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

eVTOL batteries are similar in size compared to new energy vehicles. It is important for eVTOL batteries to maintain a good balance between energy and power. The power required for takeoff and landing is usually two to four times higher than the level required for electric vehicle acceleration. times. At the same time, sufficient cruising range requires energy, and the weight of the battery cannot be too large, otherwise it will increase the gravity that needs to be overcome during flight, requiring the battery to have a high energy density.

Currently, 300Wh/Kg can guarantee a range of 200~300 kilometers. Current battery technology cannot fully meet the technical requirements of eVTOL operating scenarios such as range, life cycle, fast charging technology and energy density.

The Global Info Research report includes an overview of the development of the eVTOL Battery industry chain, the market status of Passenger Market (Solid State Battery, Sodium-ion Battery), Cargo Market (Solid State Battery, Sodium-ion Battery), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of eVTOL Battery.
