Abstracts

The global eVTOL Battery market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Currently, 300Wh/Kg can guarantee a range of 200~300 kilometers. Current battery technology cannot fully meet the technical requirements of eVTOL operating scenarios such as range, life cycle, fast charging technology and energy density.

eVTOL batteries are similar in size compared to new energy vehicles. It is important for eVTOL batteries to maintain a good balance between energy and power. The power required for takeoff and landing is usually two to four times higher than the level required for electric vehicle acceleration. At the same time, sufficient cruising range requires energy, and the weight of the battery cannot be too large, otherwise it will increase the gravity that needs to be overcome during flight, requiring the battery to have a high energy density.

This report studies the global eVTOL Battery production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for eVTOL Battery, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2023 as the base year.
