## Abstracts

According to our (Global Info Research) latest study, the global eVTOL Electric Propulsion System market size was valued at US\$ 633 million in 2025 and is forecast to a readjusted size of US\$ 1018 million by 2032 with a CAGR of 7.0% during review period.

An eVTOL Electric Propulsion System is the subsystem in electric vertical takeoff and landing aircraft that generates thrust by converting electrical energy into mechanical power to drive propellers or rotors. It typically includes key components such as electric propulsion motors, motor controllers or inverters, propellers or ducted fans, and associated power electronics and control units that regulate motor speed and thrust output. Working together with the aircraft's energy storage and power distribution systems, the electric propulsion system enables vertical takeoff, hovering, transition, and forward flight while delivering high efficiency, low noise, and reduced emissions compared with conventional combustion-based propulsion. eVTOL Electric Propulsion Systems typically range in price from about \$1,000 for small prototype propulsion units to over \$100,000 for high-power aviation-grade systems, with the total propulsion system cost per aircraft often reaching hundreds of thousands of dollars depending on power level and configuration.

The upstream supply chain of the eVTOL Electric Propulsion System mainly includes suppliers of key components and technologies such as high-performance batteries or fuel cells, electric motors, power electronics devices including inverters and power semiconductors, electronic control units, sensors, and structural materials, as well as semiconductor manufacturing and advanced materials providers that support these components. The midstream consists of companies that design and integrate the flight

power system, combining energy sources, power management and distribution units, motor controllers, and propulsion motors into a complete electrical propulsion architecture. Downstream applications are primarily within the eVTOL aircraft industry, where these systems are integrated by aircraft manufacturers for use in urban air mobility, regional air transportation, cargo logistics, emergency medical services, and other advanced air mobility operations requiring electric vertical takeoff and landing capability.
