An excavator drill attachment refers to a drill that is mounted on an excavator. There are four main types of drills: the auger type for digging soft soil, the core type for excavating concrete or hard rock, the hammer type for breaking very hard rock, and the bucket type for excavating and moving large amounts of soil. These attachments are chosen based on the capabilities and purposes of the excavator, and the optimal one is selected depending on the conditions of the site and the nature of the work.

Excavator drill attachments play a crucial role, especially in construction sites, mines, and civil engineering projects, enabling efficient and precise excavation operations tailored to the capabilities and requirements of the excavator.
