Abstracts

Excavators are heavy Construction Machinery consisting of a boom, dipper (or stick), bucket and cab on a rotating platform known as the 'house'. The house sits atop an undercarriage with tracks or wheels. They are a natural progression from the steam shovels and often mistakenly called power shovels. All movement and functions of a hydraulic excavator are accomplished through the use of hydraulic fluid, with hydraulic cylinders and hydraulic motors. Due to the linear actuation of hydraulic cylinders, their mode of operation is fundamentally different from cable-operated excavators which use winches and steel ropes to accomplish the movements.

This report studies the global Excavator production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Excavator, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2021 as the base year. This report explores demand trends and competition, as well as details the characteristics of Excavator that contribute to its increasing demand across many markets.
