## Abstracts

The global Excimer Lamps market size is expected to reach \$ 207.2 million by 2029, rising at a market growth of 5.5% CAGR during the forecast period (2023-2029).

Global key players of Excimer Lamps include USHIO, Hamamatsu Photonics, ORC MANUFACTURING and Radium, etc. The top four players hold a share over 70%. USHIO is the largest manufacturers of Excimer Lamps in the world, has a share about 55%. Asia-Pacific is the largest market, has a share about 60%. In terms of product type, 172nm is the largest segment, occupied for a share of about 70%, and in terms of application, Semiconductor has a share about 45 percent.

Excimer lamps, also known as ultraviolet excimer lamps, use excimer gas ratios to obtain high-intensity ultraviolet light of different monochromatic wavelengths, such as 172nm, 222nm, or 308nm. The ultraviolet light emitted by excimers has a single-spectrum characteristic, and the narrow spectral lines and monochromatic ultraviolet radiation spectrum make it possible to use more concentrated power for photoprocessing.

Compared with traditional mercury ultraviolet lamps, excimer ultraviolet lamps are super powerful, precise targeting, free from mercury hazards, environmentally friendly, recyclable, and free from secondary pollution. The characteristics of reaction area and short reaction time have been widely used in microelectronics, medicine, material science, and environmental protection.

This report studies the global Excimer Lamps production, demand, key manufacturers, and key regions.
