Exelon Patch is a transdermal patch that delivers rivastigmine, a medication used to treat mild to moderate dementia associated with Alzheimer's disease and Parkinson's disease. It works by inhibiting acetylcholinesterase and butyrylcholinesterase, enzymes that break down acetylcholine, a neurotransmitter important for memory and cognition. By maintaining higher acetylcholine levels, Exelon Patch helps improve cognitive function and slow symptom progression. The patch provides a controlled, continuous release of medication over 24 hours, reducing gastrointestinal side effects compared to oral rivastigmine. It is applied once daily to clean, dry skin on the back, upper arm, or chest.
