According to our (Global Info Research) latest study, the global Exhaled NO Detector market size was valued at US\$ 129 million in 2025 and is forecast to a readjusted size of US\$ 333 million by 2032 with a CAGR of 14.7% during review period.

The exhaled oxide (NO) detector is a non-invasive medical device that is specifically designed to measure the concentration of nitric oxide in exhaled breath to assess the level of airway inflammation. This technology is essential for the diagnosis and management of asthma, chronic obstructive pulmonary disease (COPD), and other respiratory diseases. By analyzing the FeNO (fractional exhaled nitric oxide) level in exhaled breath, doctors can more accurately understand the patient's airway inflammation status, thereby optimizing treatment options and reducing unnecessary medication use.

Global Exhaled NO Detector key players include NIOX Group (Circassia AB), CAIRE, ECO PHYSICS AG, Bosch Healthcare Solutions and Bedfont Scientific, etc. Global top five manufacturers hold a share over 90%.

The largest market is Europe, has a share over 42%, followed by Asia Pacific and North America, with around 21% and 36% market share respectively.

In terms of product, Desktop type is the largest segment, with a share about 80%. And in terms of application, the largest application is Adults, has a share over 62%, followed by Children.

With the global incidence of respiratory diseases such as asthma and chronic

obstructive pulmonary disease (COPD) rising, the demand for non-invasive diagnostic tools is increasing, driving the rapid development of this technology. First, the equipment is becoming smarter. Modern FeNO detectors can not only quickly and accurately measure the concentration of nitric oxide in exhaled breath, but also integrate advanced data analysis functions, such as connecting to mobile applications via Bluetooth or Wi-Fi to achieve data cloud synchronization and long-term tracking of personal health records. The new handheld detector is compact and easy to operate, allowing patients to test themselves at home without frequent visits to medical institutions.
