Abstracts

The global Exhaust Cleaner for Vacuum Pump market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In normal operation, an oil-lubricated vacuum pump creates a fine oil mist that becomes suspended in the air. The exhaust cleaner stops these particles from being expelled from the vacuum pump. The oil particles coalesce on the interior of the filter element and are recycled back into the vacuum pump. Oil emissions to the ambient air are therefore reduced to an absolute minimum. This keeps back pressure low and leads to greater energy efficiency due to minimized flow resistance.

This report studies the global Exhaust Cleaner for Vacuum Pump production, demand, key manufacturers, and key regions.
