The global Exhaust Gas Energy Saving and Emission Reduction Device market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Exhaust gas emission reduction treatment device. It includes a clean room composed of two or more clean rooms and a condensation room. The air inlet is located on the outside of the clean room or the condensation room. The inside or outside of the purifier is provided with an exhaust gas adsorption material room. The middle or upper part of the gas treatment chamber is connected, the lower part of the acid gas treatment chamber is provided with an alkaline water storage chamber, a submersible pump is arranged in the alkaline water storage chamber, and the outlet pipe of the submersible pump leads to the alkaline water treatment chamber through a pipeline. On the upper part of the upper water spray plate, the water of the water spray plate and the waste gas are sprayed and returned to the alkaline water storage room for recycling, and the acid gas treatment room is communicated with the waste gas adsorption material room. The utility model can realize the circulating use of alkaline water, can greatly save tap water, and realize no sewage discharge; it is more environmentally friendly and sanitary; its energy saving effect is remarkable; the discharge temperature of the treated boiler flue gas is consistent with the outdoor temperature, which is the same as Compared with the technology to achieve the best processing effect.
