The global Exhaust Gas Recirculation Valve Temperature Sensor market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Temperature sensors in exhaust gas recirculation systems (EGR) valve play a vital role. It is carefully installed on the exhaust gas recirculation pipe and its main responsibility is to accurately measure the temperature of the exhaust gas recirculation gas. When the exhaust gas recirculation valve is activated, the exhaust gas temperature rises. This change is keenly captured by the temperature sensor and this key information is conveyed to the electronic control unit (ECU) to ensure the normal operation of the exhaust gas recirculation system.
