According to our (Global Info Research) latest study, the global Exhaust Gas Thermocouples market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Exhaust Gas Thermocouples are temperature sensors specifically designed to measure the temperature of exhaust gases in engines, industrial processes, and power plants. These thermocouples consist of two dissimilar metals joined together, which generate a voltage proportional to the temperature difference between the exhaust gas and a reference point. The voltage is then converted to a temperature reading, allowing for real-time monitoring of exhaust conditions.
