The global Exoskeleton Suit market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Exoskeleton suit is a wearable device that provides external support to the user's body, enhancing their strength, endurance, and mobility. It consists of a frame or structure that is worn on the user's body and is typically powered by an electric motor, hydraulic system, or compressed air. Exoskeleton suits can be designed for a wide range of applications, including military and industrial use, as well as for medical and rehabilitation purposes. They are capable of enabling users to perform tasks that would otherwise be physically impossible, such as lifting heavy objects, walking or running long distances, or even climbing stairs. Exoskeleton technology is advancing rapidly, and new designs are constantly being developed with improved functionality, comfort, and safety features.
