Abstracts

The global Exosome Marker Antibodies market size is expected to reach \$ 948.4 million by 2029, rising at a market growth of 10.3% CAGR during the forecast period (2023-2029).

Exosomes are small vesicles composed of a lipid bilayer. Exosomes are formed when certain endosomes, called multivesicular bodies, fuse with the plasma membrane, releasing them into the extracellular environment. They may also be directly released from the plasma membrane. Exosomal marker antibodies are designed to dependably detect the key exosomal targets.

This report studies the global Exosome Marker Antibodies production, demand, key manufacturers, and key regions.
