The global Exosome Platform market size is expected to reach \$ 2799.6 million by 2029, rising at a market growth of 10.8% CAGR during the forecast period (2023-2029).

Exosomes are present in all body fluids under both normal and pathophysiological conditions. Exosomes are extracellular vesicles (EVs) with a size range of ~40 to 160 nm (average ~100 nm) in diameter with an endosomal origin. Depending on the cell of origin, exosomes can contain many constituents of a cell, including DNA, RNA, lipids, metabolites, and cytosolic and cell-surface proteins. The physiological purpose of generating exosomes remains largely unknown and needs investigation. Intercellular communication through exosomes seems to be involved in the pathogenesis of various disorders, including cancer, neurodegeneration, and inflammatory diseases.
