Abstracts

Expanded PTFE (EPTFE) is one of the more innovative variations in the processing and application of PTFE in recent times.

EPTFE is used to make lightweight, waterproof and breathable fabrics, micro-porous membranes, medical tubes and implants, microwave carriers, industrial sealants and high-tensile fabrics and cords.

Scope of the Report:

This report focuses on the Expanded PTFE in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Discovered in the 1970s, the EPTFE process is unique in that it does not require the use of soluble fillers, foaming agents or chemical additives. The product itself is chemically identical to PTFE - except that it constitutes billions of small pores within the structure of an article of PTFE. This gives it new mechanical properties and results in significant material savings.

The worldwide market for Expanded PTFE is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
