## Abstracts

The global Expanded PTFE Sheets market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Expanded PTFE Sheets are made of 100% pure polytetrafluoroethylene by biaxial stretching. They are stronger than joint sealants. They have the characteristics of self-lubrication, low friction coefficient, and chemical corrosion resistance. They are ideal corrosion-resistant materials. Due to its high chemical stability and through research on processing technology, PTFE sheets are increasingly used in industry and can resist almost all commonly used materials.

This report studies the global Expanded PTFE Sheets production, demand, key manufacturers, and key regions.
