Abstracts

The global Expendable Bathythermograph market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Disposable temperature and depth profilers play an important role in environmental monitoring of oceans, lakes, rivers and other water bodies, and have broad application prospects in scientific research, environmental protection, fishery and other fields. With the increasing demand for water environment monitoring, the market prospects of disposable temperature and depth profilers are relatively optimistic.

The disposable temperature and depth profiler is an instrument used to measure the temperature and depth distribution of water bodies. It usually consists of a detector placed in the water and a measuring device, which can obtain temperature data at different depths of the water body in real time.
