Abstracts

The global Expired Product Destruction Service market size is expected to reach \$ 9360 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Expired goods disposal services refer to third-party services provided to various enterprises for the compliant, safe, environmentally friendly, and traceable disposal of goods that have expired or lost their usability. Its core value lies in helping enterprises fulfill their product quality responsibilities and environmental protection obligations, preventing the risk of expired goods re-entering the market, and maximizing resource recovery or harmless final disposal of waste through physical dismantling, chemical treatment, or energy utilization, while ensuring the protection of trade secrets. It is a crucial link in the risk management of the enterprise's supply chain.

The industry has a promising future, transforming from a marginal back-end service into a growth market driven by both regulations and commercial value. Its core growth drivers are threefold: increasingly stringent regulations prompting enterprises to seek professional and compliant disposal solutions to avoid legal risks; rising corporate social responsibility (CSR) and ESG requirements making brands more focused on product lifecycle management to maintain brand reputation; and technological advancements and business model innovations, such as the application of digital traceability platforms and green recycling technologies, are improving industry efficiency and creating additional value. It is expected that in the future, integrated service providers with nationwide service networks, advanced disposal technologies, and digital management capabilities will dominate the market.
