The global Exploding Bridge Wires (EBW) Detonators market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Exploding bridge wire detonators (EBWs) are devices designed for initiating high-explosive materials in a controlled and precise manner. They consist of a thin wire bridge made from materials like nickel-chromium or other alloys. When an electrical current is passed through the bridge wire, it rapidly heats and vaporizes, creating a high-pressure shockwave that initiates the explosive material. EBWs are known for their reliability, precision, and speed, making them valuable in various applications such as military ordnance, industrial mining, and controlled demolitions. Their ability to provide precise and simultaneous initiation makes them suitable for applications where precision and accuracy are crucial. EBWs are often used in combination with electronic firing systems, offering a safer and more controlled alternative to traditional methods of initiating explosives.
