Exploding Bridgewire Detonators are commonly used in industries such as mining, construction, military, and explosive engineering. They provide a controlled and reliable method for initiating explosive materials, enabling activities such as blasting, demolition, and military operations. It is important to note that the use of detonators and explosives carries significant safety risks and must be carried out by trained professionals in compliance with applicable regulations and safety standards.

An Exploding Bridgewire Detonator is a device used to initiate the detonation of explosives. It consists of a small bridge wire, typically made of a highly resistive material such as platinum or nichrome, that is subjected to a high current pulse. When an electric current passes through the bridge wire, it rapidly heats up, causing it to explode and ignite the surrounding explosive material.
