The global Explosion Bonded Clad Steel Plate market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Explosion Bonded Clad Steel Plate is a special type of steel plate that combines two different metal layers using explosive welding technology. This process uses high-energy explosions to create powerful shock waves that force two layers of metal together to form a strong composite structure. Typically, one layer is a more corrosion-resistant alloy or stainless steel, while the other layer is regular carbon steel, which is stronger.
