## Abstracts

The global Explosion-Proof Pressure Switch market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Explosion-proof pressure switch is the most reliable instrument used in hazardous occasions. The wiring contacts are sealed in a solid space through a strong sealed shell to achieve the effect of explosion-proof. The working principle of the explosion-proof pressure switch is that the pure mechanical deformation causes the action of the micro switch. When the pressure increases, the different sensing pressure components (diaphragm, bellows, piston) will be deformed and will move upward, and finally activate the uppermost micro switch through the mechanical structure such as the railing spring to output the electrical signal. The setting method is further divided into continuous displacement type and force balance type from the functional principle. Explosion-proof pressure switches can be divided into mechanical explosion-proof pressure switches and electronic explosion-proof pressure switches according to the principle, and mechanical types are divided into ordinary and sealed types.

This report studies the global Explosion-Proof Pressure Switch production, demand, key manufacturers, and key regions.
