A solenoid valve is an electromechanically operated valve. The valve is controlled by an electric current through a solenoid: in the case of a two-port valve the flow is switched on or off; in the case of a three-port valve, the outflow is switched between the two outlet ports. Multiple solenoid valves can be placed together on a manifold.

Scope of the Report:

This report focuses on the Explosion Proof Solenoid Valves in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Worldwide, Europe is the largest market of explosion proof solenoid valve consumption value market, while China is the largest consumption volume market. It is estimated that Europe accounts for about 30% of the industry total revenue. After development of about two decades, China has become the largest consumption volume market of explosion proof solenoid valve. In 2016, China produces about 25.58% of the global total consumption volume. The market in other developing countries or regions, such as South America is becoming the most important emerging consumption market of solenoid valve. And the production technology and production scale of explosion proof solenoid valve in these regions are also developing quickly, partly driven by the capacity movement from developed countries.

For the applications of explosion proof solenoid valve, products for Chemical industry, Petrochemical, Oil and gas and Gas pipe network are the main market driven engine for industry consumption volume. The demand of explosion proof solenoid valve on Chemical industry accounts for more than 30% of the market consumption volume. The worldwide market for Explosion Proof Solenoid Valves is expected to grow at a
